

FREESUNS

SOLAR  ROOFS

Can you tell it's solar?

www.freesuns.com

Freesuns SA

Since its creation, Freesuns has been committed to transforming solar energy into an elegant, high-performance solution for all types of buildings. As a manufacturer of solar roof tiles, we combine cutting-edge technology with aesthetic appeal, offering a sustainable alternative to traditional roofs.

Designed in Switzerland, Freesuns solar roof tiles blend harmoniously with the architecture while efficiently capturing the sun's energy.

Our vision: to make solar energy accessible to all, without compromising on aesthetics, to contribute to a cleaner, more sustainable future.

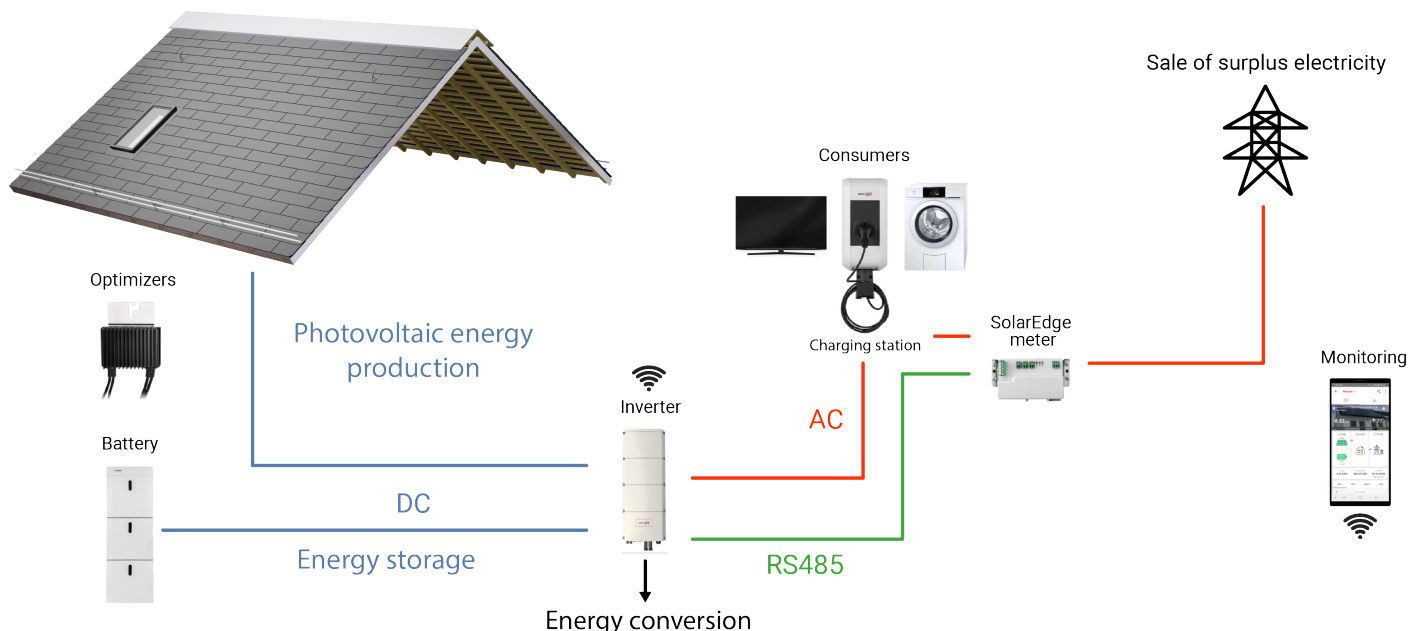

Our solution

Our solar tiles adapt to any roof, including the most complex surfaces, for unrivalled integration.

- Their small format means they can generally cover more surface area than large-format photovoltaic panels.
- Installed with a double overlap, like conventional tiles, they guarantee excellent watertightness and are resistant to heavy snow load and the elements.
- Available in a range of finishes, they preserve the aesthetics of buildings, including historic structures.
- This high-performance, long-lasting solar roof reduces energy bills, increases property value and qualifies for subsidies and tax deductions.

Imagine a roof that not only protects, but also contributes to the preservation of our planet, while enhancing the uniqueness of your home.

FREE SUNS PHOTOVOLTAIC TILES

SOLARIS™ CLASSIC

Appearance

glossy black with visible silver lines

Dimensions	690x510 mm
Power per tile	23,5 Wp
Power per m2	168 Wp
Number of modules per m2	7,14
Weight per m2	52,2 kg
Mechanical load resistance	1360 kg/m2

SOLARIS™ PREMIUM BLACK

Appearance

glossy black with no visible lines

Dimensions	690x510 mm
Power per tile	21 Wp
Power per m2	150 Wp
Number of modules per m2	7,14
Weight per m2	52,2 kg
Mechanical load resistance	1360 kg/m2

SOLARIS™ HERITAGE

Appearance

matt grey, invisible lines, slate appearance

Dimensions	690x510 mm
Power per tile	19,7 Wp
Power per m2	141 Wp
Number of modules per m2	7,14
Weight per m2	52,2 kg
Mechanical load resistance	1360 kg/m2

SOLARIS™ VDIAMOND TERRACOTTA

Appearance

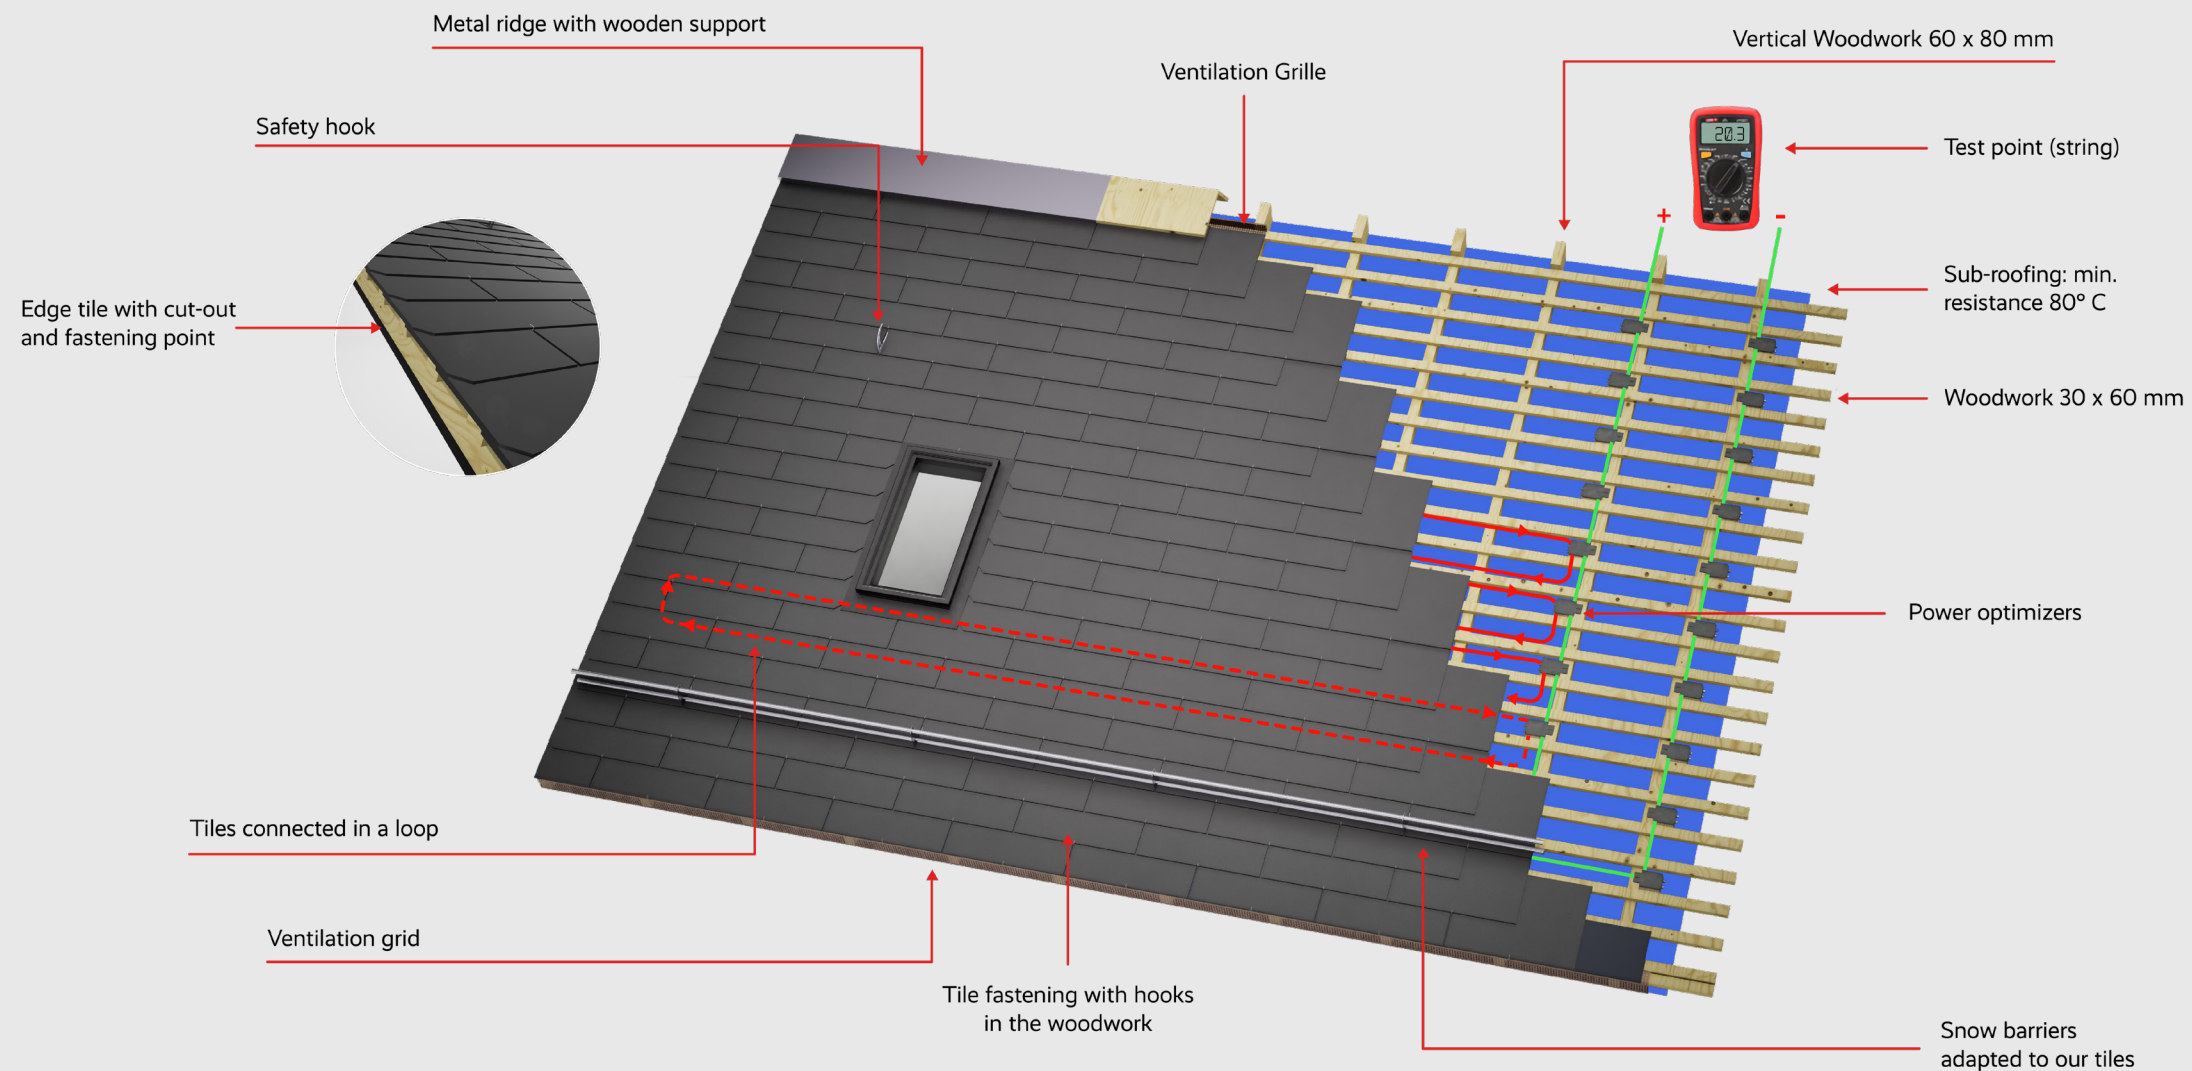

terracotta-tone finish, terracotta appearance

Dimensions	730x400 mm
Power per tile	10,04 Wp
Power per m2	97 Wp
Number of modules per m2	9,65
Weight per m2	40,53 kg

PHOTOVOLTAIC SYSTEM ARCHITECTURE

FREE SUNS

Simple installation, familiar to professionals

- Replaces a traditional roof
- Installation similar to a roof made of fibro-cement or natural slate
- Compatible with all slopes inclined from 20 to 90°
- Installation carried out by qualified roofers and installers

Robust, durable solution

- Tempered glass structure front/back
- Resistant to hail (RW4) and snow load (up to 1360kg/m²)
- Walkable tiles during installation and maintenance

Proven seal

- Double overlap for a perfect waterproofing, without additional gaskets, components or accessories

Complete ecosystem and adapted accessories

- Fastening hooks: quick and safe installation on all types of sloped roofs
- Safety hooks: comply with standards, guaranteeing the safety of installers
- Snow retention system: integrated snow bar and/or snow stop

Performance, safety and reliability

- Optimization of production in the event of shading thanks to power optimizers
- Real-time monitoring of electrical connections, considerable reduction in the risk of fire

Solution for partial roofing

- Traditional complementary products available in case of partial roofing of a roof with solar tiles, e.g. natural slate, fibrocement sheet

Ecological and profitable investment

- Reduced energy bills thanks to optimized solar production
- Eligible for subsidies and tax deductions
- Increased property value thanks to a high-performance, sustainable solar roof

YOUR **FREESUNS** ROOF IN 3 STEPS

Phase N°1 - Budget

You make a request to Freesuns by phone, email or directly on our website

Freesuns draws up an estimated budget for your roof

Phase N°2 - Detailed offer

Freesuns comes to your site, measures the roof and answers all your questions

Freesuns provides you with a precise quotation for the product and panels selected

A roofing company also provides you with a quotation

Phase N°3 - Ordering, installation and commissioning

You order the work, Freesuns produces the tiles to your specifications

20 weeks later, work begins and your roof is refurbished with solar tiles

Freesuns trains you to use the monitoring system, and then you enjoy the energy from your roof
